How Much Money Europe Invest in IoT-LSP?

Introduction

- A Global Online portal to gather information about open calls for European Large Scale Pilots Programme.
- Gathered information using a form filled out by a member of the project team.
- Submitted information is analysed and from there, graphics are generated.
- LSP Projects have its own page with general information about the project plus generated graphics.
- Analytics Portal display accumulated analytics understanding collected information.

Online Analytics Tool for IoT-LSP Europe

A dedicated Analytics Website...

...gather information about open calls

Global analysis and individual project visualisation.

Graphics for Statistics and Analysis

Large Scale Pilot Analytics

- LSP Open Call Data per Project are introduced via the form on the Website.
- This data is collected via Online Forms.
- This data is then stored via Dynamic Sheets.
- This collected data can be used to build a website for the project involved.
- Graphics can be created using Google Sheets and used on the project page.
- Once numerous projects have filled out the form Compiled analytics can be generated for all the Open Calls of the registered projects.
- These compiled analytics will be updated as new Open Calls are added.

ACTIVAGE PROJECT

ACTIVAGE (Activating Innovative IoT smart living environments for AGEing well) brings together 48 partners from 9 European countries with the objective to build the first European IoT ecosystem across 9 Deployment Sites (DS) in 7 European countries, reusing and scaling up underlying open and proprietary IoT platforms, technologies and standards, and integrating new interfaces needed to provide interoperability across these heterogeneous platforms, that will enable the deployment and operation at large scale of Active & Healthy Ageing IoT based solutions and services, supporting and extending the independent living of older adults in their living environments, and responding to real needs of caregivers, service providers and public authorities.

IoF2020 (Internet of Food and Farm 2020) brings together 70 partners from 18 European countries with the objectives to accelerate adoption of IoT for securing sufficient, safe and healthy food and to strengthen competitiveness of farming and food chains in Europe. It will consolidate Europe's leading position in the global IoT industry by fostering a symbiotic ecosystem of farmers, food industry, technology providers and research institutes. The heart of the project is formed by 19 use cases grouped in 5 trials with end users from the Arable, Dairy, Fruits, Vegetables and Meat verticals and IoT integrators that demonstrate the business case of innovative IoT solutions for a large number of application

SYNCHRONICITY

Synchronicity (Synchronicity: Delivering an IoT enabled Digital Single Market for Europe and Beyond) brings together 23 partners from 9 European countries and 1 from South Korea with the objectives to deliver a Single Digital City Market for Europe by piloting its foundations at scale in 11 reference zones - 8 European cities and 3 more worldwide cities.

Synchronicity is working to establish a reference architecture for the envisioned IoT-enabled city market place with identified interoperability points and interfaces and data models for different verticals. This includes tools for co-creation & integration of legacy platforms & IoT devices for urban services and enablers for data discovery, access and licensing lowering the barriers for participation on the market. Synchronicity pilots these foundations in the reference zones together with a set of citizen-centred services in three high-impact areas, showing the value to cities, businesses and citizens involved, linked directly to the global market.
